ABOUT

2nd-year CS student at Scaler School of Technology who builds things out of curiosity and actually ships them. Full-stack by skill, product-minded by instinct — I care about the craft as much as the outcome. Always chasing the next thing worth building.

EDUCATION

Scaler School of Technology

B.Sc + M.Sc in Computer Science (Ongoing)

Bangalore, India

Sophomore, 2nd Year

Air Force School Hebbal

High School (Completed)

Bangalore, India

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python

Frameworks & Stack: MERN Stack, Next.js, Spring Boot, Prisma

Databases & Infrastructure: PostgreSQL, MongoDB, MySQL, NeonDB, Redis, Docker, Docker Compose

Tools & Deployment: Git/GitHub, Vercel, Railway, Render, Google Cloud Platform, Inngest (Job Queues), Networking & OS, DSA

AI & MACHINE LEARNING

Foundations: Solid understanding of supervised learning (regression, classification) and unsupervised learning (clustering, dimensionality reduction).

Applied AI: Hands-on experience integrating AI into full-stack products — including real-time pose detection via TensorFlow.js.

Currently Exploring: Neural Networks — diving into architectures, activation functions, and how the math actually works.

PROJECTS

Anton | *Strictly Grounded RAG Conversational Agent*

- Built a full-stack RAG agent that answers exclusively from uploaded PDFs — no hallucinations, no guessing. Features a custom chunking pipeline (300-token chunks, 50-token overlap), cosine similarity retrieval via pgvector, SSE streaming, and a background job queue for async document processing.
- Architected a two-runtime backend: Node/Bun for I/O (auth, DB, streaming) and Python/FastAPI for CPU-bound PDF parsing & tokenization via PyMuPDF and tiktoken. Background jobs via Inngest handle the full embed-and-index pipeline with per-step retries.
- **Live:** anton-weld.vercel.app | **GitHub:** github.com/Maverick-sst/Anton

ForkedUp | *Video-First Food Discovery & Ordering Platform*

- Full-stack food delivery platform where users discover dishes through short-form videos, explore local restaurants, and order instantly. Built with a focus on performance, clean architecture, and premium UX.
- **Live:** forked-up-eosin.vercel.app | **GitHub:** github.com/Maverick-sst/ForkedUp

Doable | *AI App Builder — Clone of Emergent / Lovable (Upcoming)*

- An AI-powered app builder inspired by Emergent and Lovable — where users describe what they want and the system generates, scaffolds, and deploys full applications. Currently in planning and early development.

Morph | *AI-Powered Fitness Application*

- A project that taught me the most — from integrating TensorFlow.js for real-time pose detection to bridging a Python/FastAPI backend with a React frontend. Where my applied AI curiosity really took root.

Staying hungry, staying foolish — to build world class products.
